All series in our product
range consist exclusively of
F1 hybrids

For us, tradition and a forward-looking approach belong together

As a family business we have set ourselves the task of remaining true to our roots every day, while at the same time positioning ourselves firmly in the modern market. In doing so, we commit to values such as partnership, respect and mutual trust.

The requirements of a modern, internationally focused market set the standards for our performance and flexibility.

Our services

Production of seed and young plants

Here at Ebbing-Lohaus, we have been breeding *Primula acaulis* and *Primula polyantha* for more than 40 years. And during that time, we have developed numerous series ranging from early to late flowering with a host of special colours and consisting exclusively of F1 hybrids.

In the 1990s, the former pot plant business was transformed into a modern nursery specialising in producing seed and young plants. Our seed production is based at our site in Heiden, Germany, where our high-quality seed is sold to seed dealers and young plant nurseries all over the world.

We sell our young plants, which are produced at the same location, mainly to the German market but also increasingly to customers elsewhere in Europe. Our young plants (plugs/liners) are produced in a specially designed tray. These trays have 336 cells, each measuring 1.7 cm in diameter.

The perfect start of the primula season

As an F1 hybrid, the very early flowering *bonneli*® series stands out as being exceptionally uniform. Flowering from end November, it's the perfect choice to kick off the primula season. Its compact growth habit virtually eliminates the need for growth regulators (PGRs), and with a density of 60–80 plants/m² you're guaranteed a high yield per area.

- Uniform, compact growing habit
- Can be grown without growth regulators (PGRs)
- High plant density
- Mix of bright colours and special colours
- Flowering time from the end of November

Messengers of spring

Our new *primella*® mixture brings an early taste of spring to those dark winter months. It offers the entire spectrum of the most popular colours in an attractive and harmonious ensemble. The plants in the *primella*® series are only suitable for growing under glass and bring together the most popular primula characteristics in one single mixture, which includes both single colours ranging from white through yellow to blue, as well as a number of special colours. The medium-sized flowers stand out from the compact plants with a uniformly round habit. The romantic, spring-like feel is enhanced in some flower colours by a delicate edge in a contrasting shade. A great mixture for an early start to the flowering season and a highlight for pre-spring sales.

fruelo® pink

fruelo® blue

fruelo® elcora mix

With its wide range of colours and stately habit, *fruelo*® is one of the most versatile series in the Ebbing-Lohaus product range. This early flowering, robust primula is perfect for sales from Christmas onwards. With its strong growth, it is also suitable for the cultivation in larger pot sizes. Special colours are available as part of the *fruelo*® standard mix or as a separate elcora colour mix. Our special colours are particularly eye-catching and an excellent selling point, especially in early varieties.

- Vigorous series, also suitable for outdoor cultivation
- Also ideal for pot sizes up to 12 cm diameter
- Flowering time from the end of December

A touch of diva

Within the ranks of yellow varieties, *eltangi*® is one of the elite: with its unusual flower markings, it's perfect for the more discerning customer. This compact growing plant is crowned with yellow flowers with a bright red ring on the eye-catching petals.

- Round, compact plant habit
- Unusual flower markings with striking red ring
- Uniform flowering
- Ready for sale from late January to late February

Little all-rounder

Within the Ebbing-Lohaus assortment, *elmini* embodies the miniature plant mixture with an extensive colour range. Minis have stolen consumers' hearts owing to the diversity of applications and their more than pleasing appearance. The tiny florets of these compact mini plants perfectly match the spring mood. The colourful, lively *elmini* mix is like a cheerful Primrose nursery school, full of vitality and exuberance.

- Small flowers to match the plant habit
- Mix composed of an extensive range of colours
- Recommended cultivation in pot size 6 cm
- Flowering period from early February onwards

Simply outstanding

sibel® is a must for anyone who loves something special. This polyanthus-type primula with its large blooms that sit atop strong stems standing proud above the foliage is ideal for making a statement. But even with its longer stems, this plant has a compact, uniform appearance. Whether in bright spring sunshine yellow, two-tone scarlet or elegant white and lime, *sibel* always cuts a good figure.

sibel® purple

Elegant uniform appearance

Primula acaulis *elunistar*® offers the widest choice of colours in the Ebbing-Lohaus product range. This series is also extremely robust and vigorous.

As an F1 hybrid, uniform plant development is guaranteed. The plant's round habit is particularly attractive, with the foliage forming a rosette that draws the eye to the large, pretty flowers. The *elunistar*® standard mix includes lots of special colours which are also available separately. We also offer a pure *elunistar*® elcora colour mix.

- Uniform, medium-early series
- Round plant habit
- Bright colours and large blooms
- Lots of special colours, all available separately
- Robust series
- Flowering time from the end of January

The eye-catcher

This exclusive series comes in exceptionally bright colours that contrast beautifully with the dark foliage. As if creating a backdrop, the leaves of these compact growing plants take on a dark green hue that is the perfect foil for the strong colours of the *delia*®'s blooms. An eye-catching series that you simply can't pass by. What's more, these compact growing plants can be grown without growth regulators (PGRs) and make excellent use of space in the greenhouse. As an F1 hybrid, *delia*® guarantees uniform growth and readiness for sale.

- Unusual, brilliant colours
- Compact habit so no need for growth regulators (PGRs)
- Flowering period from early February onwards

Lovely diversity

The medium-early to late flowering *aurela* is offered in an attractive mix with a well-balanced, harmonious colour palette. The *aurela* is characterised by bright, clear coloured blooms with a yellow eye that contrast beautifully with the dark green, rosette-forming foliage. *aurela* is a compact plant that needs no growth regulators (PGRs), so a high density of approx. 80 plants/m² is possible.

- Compact plant habit
- Excellent yield per area
- Ready for sale from late February

Reliable primulas for late cultivation

With a track record going back decades and yet constantly being reinvented, the *eblo*® series is an indispensable part of any late primula growing programme. Besides their large flowers in bright colours, these uniform growing plants also stand out for the diversity of their petal markings. In addition to clear, bright colours, they also come with white-edged petals and in elcora colours. This series has it all. And it ticks all the boxes on the inside too: the robust *eblo*® is perfect for growing in unheated conditions.

Dark-leaved polyanthus for late cultivation

Cheerful flowers sitting proudly on long stems above dark green foliage. As a polyanthus type, *stella*® is the right choice for primula lovers who are after something different. Flowering from early March, this primula has a loose, very natural-looking plant habit. Whether for the window sill, the patio or the kitchen garden, the robust, free-flowering *stella*® will turn heads among both wholesale customers and consumers.

For garden or balcony

Nostalgic charm or modern spontaneity: the *Victoriana* gold-edged primula is at home anywhere. As a pot plant it will adorn your windowsill in the spring, and in the garden this late-flowering series provides long-lasting blooms well into April. The decorative flowers are borne on long, graceful stems in attractive loose umbels, about 20 centimetres above the leaves. The *Victoriana* series currently offers four varieties in expressive colour combinations. The bright yellow centres are framed in red, purple, mocha and black and finished off with

yellow lacing to the petals. These robust *Victoriana* primulas are perfect as a group in bowls, pots and flowerbeds. They are hardy, thrive in the garden in moist, humus-rich soil, and their extraordinary flowers will bring more pleasure next year.

There is a long tradition of growing *Victoriana* perennial primulas in our gardens as these plants, with their filigree patterned flowers, have been cultivated in Europe since the 15th century. 200 years later there was no stopping

the passion for collecting garden primroses, because enthusiasts wanted to own as many colours and shapes as possible. Many varieties were lost during the last century – just one more reason to revive this tradition for a plant with so much timeless charm.

telda Primula polyantha F1 hybrids

Masses of vibrant flowers

With their eye-catching appearance, the varieties in the new telda series are designed to inspire. The abundance of vibrant flowers adds a bright splash of colour to every spring border. The habit of these late-flowering polyanthus showcases the merits of this special type of primrose. The loose umbels project well above the narrow, dark leaves, and yet the entire plant has a compact appearance. These unusual primroses match perfectly with the trend of natural-looking plants that are reminiscent of the original species. But before things get too nostalgic, telda sweeps this Victorian primrose strain straight into the 21st century: with their attractive spectrum of radiant, clear colour shades and impressive floral display, telda varieties are the perfect spring perennial for cheerful, eye-catching bowl plantings.

- Dark foliage
- Special/unusual colours, interesting colours
- Compact, late polyantha type
- Well suited for planting bowls and beds
- Nice contrast between dark foliage and bright colour

telda mix

For an extended primula season

With large flowers, vibrant colours and a uniform plant structure, the new *gelaya* series looks impressive even at first glance. But this very late-flowering series has another advantage: it significantly extends the selling period for your primula range as the plants do not flower until the middle of March. Cultivation is also very cost-effective as *gelaya* can be grown in an unheated greenhouse.

- Large-flowered, highly uniform series in clear, strong colours
- Healthy, fresh, dark-green foliage
- An important addition to the late range
- Very robust, so suitable for growing in unheated conditions
- Compact plant habit
- Very late flowering, around 10 days after *eblo*®
